

Contributing to a hydrogen society through simple leak checks

Leaking hydrogen, LNG, isobutane, or other gases used or encountered at hydrogen stations or production facilities can cause fires or explosions. The NC-1000 Portable Combustible Gas Detector helps by detecting these gases. A single NC-1000 unit is capable of detecting hydrogen, LNG, and isobutane at ppm levels. Individual gas levels can be read directly on the detector, allowing to check results immediately.

Portable Combustible Gas Detector

Model:

NC-1000

Features

- **Capable of detection at ppm levels**
→ Detects even the slightest leaks.
- **Bar meter and digital display**
→ Detection results can be checked at a glance.
- **Incorporates data logger functions**
→ Allows management of detection results.
